

Construction Site Information

To avoid unnecessary delays in completing your service installation, we ask that the construction site be prepared prior to the arrival of our line team.

If you have any questions about site preparation, please call us at 208-388-2323 or 800-488-6151 and ask for “New Construction.”

Site preparation should include:

- Installing the meter pole, flagging its location, or marking the location on the foundation
- Providing clear access to the site
- Identifying all property lines with property pins and written documentation
- Establishing the final grade of the site
- Obtaining proper permits

* For proper location and other details, refer to the Service Requirements in the 1-Ø or 3-Ø Services list from the [New Construction Electrical Service](#) Web page.
